Floating Islands: Reversing Water Pollution

by Gerri Green

A commercial company located in Montana has developed a solution to water pollution in bodies of water. Delavan Lake is constantly battling run-off from farmers' fields which causes high concentrations of nitrates and phosphates. These nutrients feed algal blooms that look bad and are toxic to fish and humans. The Delavan Lake Improvement Association in conjunction with the Town of Delavan is investigating using Floating Islands to reverse the effect of these pollutants and improve water
